

MS Exchange Server Backup

Automatic, reliable and secure offsite backup of your databases

- ▶ Backup databases with no downtime
- ▶ Restore an individual email, email folders or the entire mailbox store

Emails have become the central mode of communication in the new economy with employees, partners, shareholders, suppliers and stakeholders spread across time and space. They hold sensitive information on business, sales, marketing and policy decisions; purchase and invoice proofs, presentations etc. and serve as official records of daily work transactions in an organization.

The Aberdeen Report titled 'The Ins and Outs of Email Vulnerability', 2007, states that 44% of all organizations experienced data loss incidents through email, while 22% don't know or don't measure - meaning that the incidence is likely much higher. In view of audits that make it imperative for corporates to archive emails and for business continuity, none can afford to lose email data.

The predominance of emails in business transactions has made the Exchange Server mission-critical to organizations of all sizes. It is a challenge for any IT manager to ensure that the email server is up and about round the clock, and backed up with no downtime.

An email outage - caused by accidental deletion, hardware failure or corruption of database, natural disasters can bring down your business by causing a break down in internal or external communication.

If your company uses the Microsoft Exchange Server to send and receive emails, then you can rely on IBackup Professional. It restores your entire mail server, down to a single email, in case it is lost, deleted, severed or corrupted.

The IBackup Professional advantage

Reliable

Secure and automatic backup of running database

Secure

Encryption on data transfer and at rest

Flexible

Scalable as your business expands; needs no other hardware / software

Support

Support over live chat, email or phone

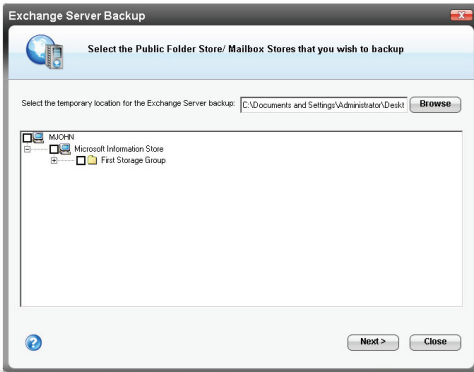

IBackup Professional online backup solution

Software-as-a-service email server backup solution offered by IBackup Professional takes care of concerns relating to archiving, encryption and outages. No matter how many mail servers you add, we have the infrastructure and software to support backups without interrupting the services.

"Organizations that have actively pursued effective email security are realizing concrete gains in productivity and reduced costs."

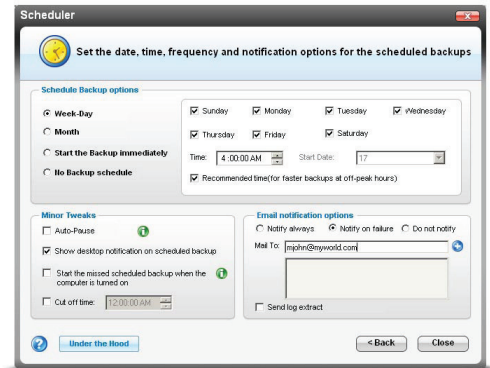

Aberdeen Report, 'The Ins and Outs of Email Vulnerability', 2007.
